

Municipal UAS Platform — Capability One-Pager

One shared surveillance-drone system, tasked on demand by every municipal department.

Faster emergency response · lower-risk inspections · richer planning data · shared cost, high utilization.

Why One Shared System

A single airframe fleet, interchangeable sensor payloads, command software, trained crews, and a governance framework — re-tasked across departments. Utilization is spread, so ****cost per flight hour falls and return on the capital asset rises****. One capital purchase, allocated by usage.

Capability Matrix by Department

Department	Primary Missions	Key Payloads	Value Driver
Police	Drone-as-First-Responder, overwatch, suspect/vehicle tracking, scene mapping	EO zoom, thermal, spotlight, loudspeaker	Response time, officer safety
Events Security	Crowd density, perimeter, lost persons	EO, thermal	Public safety, liability reduction
Emergency Mgmt	Search & rescue, damage assessment, medical delivery	Thermal, mapping, delivery payload	Lives saved, claim accuracy
Fire	Wildfire mapping, hotspots, command view	Thermal, EO	Containment, firefighter safety
Traffic	Congestion, incident detection, collision mapping	EO, mapping	Throughput, road-clearance time
Public Works	Bridge / roof / utility / drainage inspection	EO zoom, LiDAR, thermal	Inspection cost avoidance
Environment	Illegal dumping, water/air quality, code compliance	Multispectral, gas sensors, EO	Compliance, enforcement
Planning / GIS	Orthomaps, 3D models, change detection	Mapping, LiDAR	Living data asset
Parks / Coast	Turf health, beach safety, habitat survey	Multispectral, EO, thermal	Asset health, public safety
Critical Infra	Perimeter security, intrusion verification	EO, thermal	Asset protection

The Value Levers

- **Cost avoidance** — replaces helicopter hours, scaffolding/cherry-pickers, road closures, survey contractors.
- **Faster response, lower risk** — minutes saved save lives; crews kept out of hazard.
- **Recovery & revenue** — faster road clearance, stronger disaster-claim documentation, enforcement recovery.
- **Compounding data asset** — recurring imagery feeds GIS and digital-twin programmes.

Governed for Public Trust

Published use policy · public flight dashboard · data-retention limits · tamper-evident audit logs · geofencing · privacy-impact review · BVLOS/Remote-ID compliance · certified pilots.

Clear exclusions: no weaponized payloads, no chemical agents against people; crowd use is observational public-safety monitoring only.

Pricing (Formula-Based, Auditable)

Recover Total Cost of Ownership + margin; justify on value/cost-avoidance. Choose **per-flight-hour**, **per-mission**, **subscription (Drone-as-a-Service)**, or **tiered**. Department cost allocated by share of usage. Full formula framework available.

Next Step

A **discovery workshop** to prioritize the mission set, followed by a **2–3 use-case pilot** and an **ROI review** against the value model.
